

LUMINOSITY

Luminosity is our proprietary radiant pigment featuring advanced holographic color-shifting technology. These pigments refract microbursts of color and light—similar to the way a prism creates a rainbow—producing a striking, multi-dimensional effect that captures attention. Luminosity is an excellent way to add depth and visual impact to decorative concrete floors.

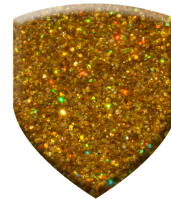

Our industrial-grade, polyurethane-coated glitters are solvent-resistant and can be blended into nearly any clear coat, resin, or epoxy system. Each particle is also treated with UV inhibitors to help reduce fading and maintain vibrant color when exposed to sunlight over time.

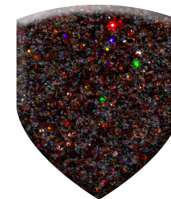

SILVER | LB 100

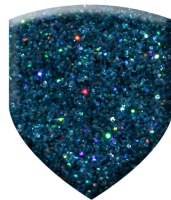

BLACK | LB 200
