

CARBIDE SCRAPERS

The Concrete Protector's Carbide Scrapers were engineered to address a long-standing challenge in surface preparation: the removal of stubborn glue and mastic residues. Traditional diamond and metal cutting tools often generate excessive heat when used on adhesives, leading to premature tool wear, reduced efficiency, and the creation of a gummy residue that is difficult to manage.

Carbide Scrapers overcome these issues by utilizing blades made from cemented carbide—one of the hardest materials available. This results in a highly aggressive and effective scraping action capable of removing even the most demanding adhesives and mastics with ease.

Designed as a must-have tool in any floor preparation system, Carbide Scrapers are directional and available in both clockwise (CW) and counterclockwise (CCW) configurations to match equipment rotation and ensure optimal performance.
